OVERVIEW

Launched in 2022, this Hatteras 105 Raised Pilothouse is the final hull produced and represents the most comprehensively optioned superyacht to emerge from the Hatteras yard. Expertly specified and immaculately maintained, she arrives with an extraordinary array of factory options and bespoke upgrades, offering a rare opportunity to acquire a late model, pedigree motor yacht with true long range bluewater capability, a custom crafted elegant interior, generous volume and state of the art systems integrated seamlessly throughout. Constructed using Hatteras' resin infused foam core method with a solid fiberglass hull bottom, the yacht delivers exceptional structural stiffness, weight savings, enhanced efficiency and an unusually quiet running character. Her hull and superstructure are fully painted in premium polyurethane, elevating the classic exterior lines and refined silhouette. Propulsion comes from upgraded twin Caterpillar C32A engines, each rated at 1900 HP and covered by an ESC extended warranty, while zero speed ABT TRAC fin stabilization, powerful bow and stern thrusters and remote docking controls ensure effortless command whether crossing oceans or slipping into tight marina berths. Designed for refined cruising and entertaining, she accommodates up to nine guests in four sumptuous staterooms, including a full beam owner's suite, and provides dedicated crew quarters for four across two cabins to guarantee discreet, professional service on every voyage.

DETAILED DESCRIPTION

Custom Lalique crystal lighting accents

Custom-made Lalique Crystal “Masque de Femme” sconces introduce an extraordinary level of artistry and refinement to the yacht’s tailored interiors, offering a standard of craftsmanship rarely seen aboard contemporary motor yachts. Discreetly integrated on the main level, these signature crystal fixtures are incorporated into the vessel’s custom millwork, harmonize with the refined ceiling inlays and complement the handcrafted furnishings, imbuing the interior with the enduring elegance of French Art Deco.

Featured interior design elements

Custom Lalique crystal “Masque de Femme” sconces provide a signature luminosity, paired with a handcrafted millwork package that threads gracefully throughout the yacht. Bespoke ceiling inlays elevate the visual drama of the salon and aft deck, while wide-plank flooring anchors the main level with tailored elegance. Hand-made area rugs add layered texture to the salon and formal dining areas, their presence enhanced by premium decorative lighting and refined accent fixtures. Throughout all levels, bespoke luxury interior detailing and artisanal finishes deliver a cohesive, museum-quality aesthetic.

Guest accommodations

Sleeping up to nine guests across four sumptuous ensuite staterooms, the yacht is anchored by a full-beam master suite featuring separate his-and-hers heads and an expansive, spa-sized shower. Comfort is enhanced by upgraded premium mattresses throughout, and a discreet safe is fitted inside the master stateroom closet for added security. Light and mood are easily controlled with

power-operated blinds in the salon, dining area and every guest stateroom, while underfoot custom wide-plank flooring is warmed by handcrafted area rugs in the salon and formal dining area. Crystal wall sconces and custom ceiling inlays provide a soft, elegant illumination, and abundant upgraded storage paired with bespoke cabinetry ensures every element is as practical as it is exquisitely finished.

Crew accommodations

Meticulously arranged to balance functionality with comfort, the crew quarters sleep four in two private cabins and include a dedicated lounge with a compact galley fitted with a microwave/convection oven, refrigerator, sink and integrated storage. Laundry facilities—a washer and dryer—are located within the crew area for convenience, and the vessel is supplied with premium linens and comprehensive outfitting packages to ensure the team is prepared and operations run smoothly.

Interior features & entertainment

Designed to blend enduring elegance with uncompromised long range cruising functionality, the interior displays exceptional craftsmanship at every turn. Precisely executed bespoke millwork sweeps beneath articulated architectural ceiling treatments, while choice stone accents provide a tactile warmth that elevates the yacht's refined character. Carefully layered, high end lighting schemes enhance both mood and practicality, shaping a calm and consistently luxurious onboard atmosphere.

Salon & dining

A formal dining salon, enhanced by bespoke inlay ceiling treatments, creates

an atmosphere of refined sophistication, while power blinds throughout the main deck provide effortless, elegant control of light and privacy. Entertaining is made seamless by an integrated entertainment system with Crestron automation running on a dedicated whole-vessel network infrastructure, and whole-boat Wi-Fi together with cellular internet connectivity keep guests fully connected while underway. A clear ice maker in the salon adds a refined touch to service, and a DirectTV system with six tuners, matched to a premium audio/video package distributed throughout the vessel, ensures immersive picture and sound in every social space.

Country kitchen

Designed with the chef at its heart, this country kitchen is built for extended cruising and effortless entertaining, anchored by premium Wolf and Sub-Zero appliances, bespoke cabinetry and ample storage. A comfortable breakfast nook for four creates a relaxed spot for everyday dining, while a generous central island fitted with three bar stools increases the work surface and provides convivial seating. The carefully considered layout marries practical efficiency with a warm, inviting atmosphere, offering an elegant setting for both preparing meals and entertaining guests.

Flybridge & exterior entertainment

The enclosed bridge deck has been reimagined as a sumptuous, climate-controlled entertainment salon, supplying approximately 48,000 BTU of air conditioning beneath the rigid hardtop enclosure. Centered on the flybridge is a helm station with repeat controls and Garmin electronics presented across three displays, flanked by twin Custom Platinum helm chairs and a Custom Double Helm seat to ensure effortless operation and comfortable conversation. The entire bridge is fully enclosed and air

conditioned, with removable sunshade panels to tailor light and airflow. Luxurious custom high gloss wood tables with mother of pearl inlays anchor the social space, complemented by a wet bar with a solid surface countertop, refrigerator and ice maker, four custom bar stools, and a large electric grill. A Jacuzzi spa invites open air relaxation, while custom sail shades extend shaded comfort over the bow seating area and the upper aft deck; an additional ice maker is neatly located beneath the bridge access stairs for added convenience.

Outside, thoughtful exterior amenities elevate every moment on the water. A hydraulic swim/tender platform streamlines tender launching and water access and is enhanced after dark by an underwater lighting package. Teak decking graces the aft deck, the swim/tender platform, and the upper and lower stairs, while the tables on the aft deck and at the bow reflect the flybridge's artistry with high gloss finishes and mother of pearl inlays. Boarding is seamless via an articulating ladder with dedicated storage, and exacting maneuvering is supported by port and starboard wing stations, twin remote controlled ACR searchlights, and a remote docking controller. For peace of mind while underway, aft deck PTZ security cameras and an engine room PTZ camera system provide vigilant oversight of every passage.

Main engines

Twin Caterpillar C32A diesel engines, each rated at 1,900 horsepower, supply the yacht's propulsion; this time-tested configuration is celebrated for its steadfast reliability and outstanding long-range capability. The main engines are protected by an ESC extended-warranty program through December 2026 or up to 2,500 operating hours, with the opportunity to extend the coverage for added peace of mind.

Stabilization & maneuvering

ABT zero-speed fin stabilization preserves a composed, comfortable ride whether slicing through waves or lying at anchor, countering roll in all conditions. A 55 HP bow thruster paired with a 45 HP stern thruster delivers decisive, finely tuned control for precision maneuvering in tight quarters. Remote docking controls allow operation from multiple positions, and dedicated wing stations on both port and starboard provide unobstructed sightlines and intuitive handling for graceful approaches and departures.

Generators and electrical

Anchored by upgraded twin Kohler generators, each rated at 55 kW, the yacht benefits from substantial, dependable power reserves to support every system and comfort on board. Acoustic disturbance is minimized by noise-reducing generator exhaust water separators, preserving a calm and refined onboard atmosphere, while an integrated, whole-vessel electrical management system coordinates distribution and monitoring to provide seamless, intelligent power control throughout the yacht.

Navigation & electronics - premium Garmin electronics package

A cutting edge Garmin navigation ensemble transforms every voyage, pairing integrated multifunction displays and precision radar with seamless autopilot integration, comprehensive engine monitoring and an advanced vessel management system that brings control and operational insight together in a single, intuitive interface. Complementing this premium suite is a clearly legible chain counter for confident anchoring, a commanding Kahlenberg air horn driven by an upgraded compressor, and a dedicated onboard network

architecture engineered for dependability, while cellular internet ensures connectivity both underway and at anchor and a whole yacht Wi-Fi system provides robust coverage from stem to stern.

Climate control & ventilation system

At the heart of the yacht's environmental comforts lies an interior chilled-water air conditioning installation, driven by three five-ton AC units fitted with soft-start compressors to ensure smooth, efficient operation, and complemented by reverse-cycle heating for comfortable cruising in any season. Intuitive HVAC controls are conveniently located in the pilothouse, the galley and every guest stateroom, while the enclosed bridge deck benefits from a dedicated 48,000 BTU air conditioning system for bespoke cooling. Ventilation has been engineered with equal care: recirculating ventilation fans serve all heads, two AC ventilation fans and two tube-axial variable-speed blowers provide balanced air movement, and a high-capacity 25,500 CFM DC ventilation blower delivers sustained, whisper-quiet fresh airflow throughout the vessel.

Engineering & construction

Built to uncompromising superyacht standards, this Hatteras combines advanced engineering systems with time-proven construction methods to ensure reliable global cruising. The hull and structural elements utilize resin-infused foam-core construction to maximize strength and efficiency, supported by a solid fiberglass hull bottom designed to instill confidence offshore. The exterior receives a premium Alex-seal polyurethane paint finish across both hull and superstructure, while an ablative polymer/copper anti-fouling bottom coating helps preserve performance and reduce maintenance. Beneath the finish, molded fiberglass longitudinal stringers

paired with steel engine beds deliver steadfast rigidity and precise machinery alignment for long-lasting durability at sea.

Fuel & mechanical systems

At the core of the yacht's systems are fiberglass fuel tanks laminated with fire retardant resin and plumbed with bronze fittings throughout, marrying robust longevity with uncompromising safety. Pristine, reliable fuel delivery is achieved through fuel/water separator filters equipped with electric priming pumps, working alongside a dedicated fuel transfer arrangement that incorporates pump protection and a full tank shut off for assured control. On the transfer side, triple 30 micron Racor filtration polishes every gallon before it reaches the machinery, while serviceability is enhanced by an oil changing system that serves the engines, generators and gears and is supported by dual 110 gallon oil storage tanks. An air intake demister in the engine room maintains a dry, efficient environment to ensure optimal performance.

Electrical systems

Meticulously upgraded electrical systems provide reliable worldwide cruising capability with comprehensive redundancy throughout the yacht. The shore power and distribution architecture comprises two retractable 240V/100A shore power cords operated via wireless remote cord controls, supported by two 100A polarization transformers with a boost function to condition and stabilize incoming voltage. Power is managed through AC and DC distribution panels equipped with magnetic breakers, and a dedicated DC electronics breaker panel on the flybridge offers localized protection and control; GFCI protected AC outlets are thoughtfully and accessibly located throughout the vessel.

Battery systems

A pair of heavy-duty AGM marine battery banks, each 24V, are securely installed within fire-retardant fiberglass battery boxes and are supported by automatic battery chargers alongside an automatic battery paralleling system to provide seamless power distribution and built-in redundancy. Battery control panels fitted with isolation switches in the engine room deliver instant, secure control over the entire installation, elevating safety, simplifying service access, and ensuring dependable onboard power management.

Plumbing & freshwater systems

This yacht is outfitted with substantial freshwater capacity and commercial-grade equipment tailored for long-distance cruising: an 820-gallon fiberglass freshwater tank feeds an AC freshwater pump and a centrally positioned freshwater manifold system with individual shutoff valves, providing consistent, precise pressure to every outlet. Dockside convenience is provided via a shore water connection with a pressure regulator, while onboard comfort is elevated by freshwater toilets in all heads and freshwater showers with fully enclosed doors in each lower head. Potable supply is secured by a 1,800 GPD water maker working in tandem with a Spot Zero water purification system. Hot water needs are handled by two 50-gallon 240V water heaters, augmented by one 30-gallon 240V water heater, ensuring rapid recovery and steady temperatures throughout the vessel.

Holding tank system

Crafted to simplify onboard sanitation during extended passages, the system is built around a capacious 420-gallon fiberglass holding tank. Shoreside servicing is made effortless via a discreet deck pump-out plate, while a

dependable 24V overboard discharge pump provides controlled evacuation where regulations permit. For complete confidence, each head is fitted with a three-quarter-full holding tank indicator light, delivering an immediate, easy-to-read status at a glance.

Running gear

Designed to deliver uncompromising reliability, the running gear combines sturdy bronze rudders with dripless rudder seals to produce crisp helm feedback while keeping the bilge dry and tidy. Thrust is transmitted via Alloy 22 high-strength propeller shafts, with manganese bronze struts and couplings ensuring steadfast alignment and long-term resilience. At the stern, Nibral high-performance eight-blade propellers convert torque into remarkably smooth, quiet thrust, enhancing efficiency and control across the full speed range.

Additional equipment

Equipped for true blue-water independence and refined living, the yacht carries a 1,800 GPD water-maker paired with a Spot Zero water purification system to supply abundant, ultra-pure water on demand. Safety is addressed with two ten-person life rafts fitted with hydrostatic release, while a hydraulic swim and tender platform simplifies boarding and tender handling. Multiple refrigeration units and dedicated ice-making stations support extended cruising and effortless entertaining by providing dependable cold storage throughout. The engine room is finished to a high standard and fitted with custom storage racks for excellent accessibility, and extensive spare-storage solutions keep critical parts neatly organized and immediately to hand.

Custom exterior furnishings & entertainment areas

This Hatteras 105 RP has been extensively bespoke-appointed with exterior furnishings and entertainment features seldom seen on vessels of this size, transforming every open air gathering into an expression of meticulous craftsmanship and considered detail. Handcrafted Release Marine exterior tables act as distinguishing focal points, their tops set with luminous mother of pearl inlays that grace the aft deck, bow seating and flybridge tables. Beneathfoot, custom teak decking runs continuously across the aft deck, swim platform and exterior stairways, imparting a warm, traditional yachting pedigree to each transition. Practicality has been matched with strength through reinforced stern cleats, engineered to ensure secure, confident tender towing while preserving the boat's refined presentation.

Pilothouse: helm and control stations

At the helm, command is intuitive thanks to four Garmin displays that consolidate navigation and vessel data into one refined panel. Electronic throttle and clutch controls provide immediate, finely tuned response, supported by emergency backup systems for added confidence. An engine synchronization system keeps propulsion perfectly matched, while electric power-assisted steering converts the lightest input into smooth, precise handling. A softly lit compass supplies a constant heading reference, and port and starboard wing stations extend visibility and control during close-quarters work, all further enhanced by a remote docking controller that ensures calm, confident maneuvering.

Navigation electronics

At the helm, dual radar arrays sweep the horizon with unerring accuracy while

depth sounders trace the contours beneath in real time. The Automatic Identification System (AIS) enhances situational awareness by presenting clear, up-to-date traffic information, and integrated GPS/chartplotters render high-resolution charts and enable seamless route planning. Crisp VHF radios deliver reliable ship-to-ship and ship-to-shore communication, augmented by powerful hailer horns for succinct, authoritative announcements. For effortless passagemaking, refined autopilot systems hold the selected heading with composed precision.

Convenience features

Discreetly integrated USB charging outlets are seamlessly incorporated into the yacht's refined interiors, with easily accessible points in every stateroom as well as in the salon, the galley and the crew lounge, ensuring personal devices stay powered whether you are relaxing or working on board.

Exterior entertainment features

Social life aboard is effortless and impeccably appointed, beginning on the aft deck where a bespoke wet bar houses a refrigerator, ice maker and plentiful storage cabinetry for service and staging. Ascending to the flybridge, an elevated wet bar with solid surface countertops, a refrigerator, ice maker, sink and three custom bar stools creates a refined focal point for convivial gatherings, while a large double electric grill sits mere steps from the flybridge Jacuzzi spa to combine alfresco cooking with immediate access to relaxation. Custom sail shades extend over the bow lounge and the upper aft deck to temper the sun without interrupting the sweeping views, and practical conveniences have been integrated throughout with freshwater washdown outlets at the swim platform, bow, aft deck and flybridge, plus a freshwater swim shower located on the swim platform.

Fire protection & safety systems

Constructed to meet genuine superyacht safety criteria, the vessel features an integrated suite of onboard monitoring and suppression systems with a particular emphasis on comprehensive fire protection. An FM-200 automatic fire suppression system furnishes a rapid, clean-agent response, while both automatic and manual fire control mechanisms are provided to enable decisive intervention. Portable dry chemical fire extinguishers are located throughout the yacht, and smoke detectors protect every principal interior space—including all staterooms, the salon, galley, crew lounge and the electronics locker—while carbon monoxide detectors are installed in all staterooms, the salon, galley and crew lounge. Together, these systems provide continuous vigilance and reassuring confidence at sea.

Additional information

Launched in 2022, this Hatteras 105 Raised Pilothouse is the most fully outfitted and singularly customized hull to emerge from the builder, pairing a distinguished American construction lineage with systems integration at the superyacht level. The interior spaces reflect bespoke craftsmanship throughout, and a comprehensive, fully documented maintenance and shipyard program underpins her mechanical and aesthetic pedigree. Presented as a turnkey, collector-grade offering, she represents a rare and ready opportunity for discerning owners in the global yacht market.

CONTACTS

Shestakov Yacht Sales is a brokerage company specializing in the sale and service of yachts worldwide. The company offers services for buying and selling both new and used motor yachts, sailing vessels, and luxury superyachts. They also provide yacht registration, insurance, technical maintenance, crew selection, and charter organization services across the U.S., Canada, Latin America, the Caribbean, and the Bahamas.

The founder and lead broker of the company is Andrey Shestakov, a licensed and certified expert with extensive experience in marine engineering and shipbuilding.

The company has an extensive network of partnerships with major yacht manufacturers worldwide and provides services in multiple languages, including Russian, Ukrainian, Spanish, and English. The office is in Dania Beach, Florida, USA.
