## OVERVIEW

---

Lightweight, robust, and rigid

In 2007, X-Yachts unveiled the X-65, marking the beginning of their use of epoxy resin for crafting high-performance yacht hulls. This method of epoxy infusion construction provides exceptional control over the laminate, optimizing it for maximum strength and rigidity while reducing weight.

In the X56 model, the weight reduction is strategically used to enhance the yacht's stability, allowing the crew to enjoy a more relaxed and secure experience. The hull undergoes a curing process, baked at elevated temperatures for nearly 24 hours, which not only optimizes the material properties but also reduces the risk of darker hull surfaces warping and losing their pristine finish.

With over a decade of expertise in building epoxy-infused yachts, X-Yachts decided in 2018 to adopt this advanced technology across all their models, setting them apart as one of the few yacht manufacturers to do so. If you're considering a yacht purchase, explore yacht sales in the current boat location and discover the elegance and innovation of X-Yachts.
