OVERVIEW

The hull and deck are crafted from pre-impregnated carbon fiber layered over a Nomex core, with varying density and thickness to optimize the shell's mechanical performance. Inside, the structures are composed of carbon and treated under vacuum, seamlessly integrating into the furnishings. To achieve minimal weight and maximum durability, many interior elements like furniture fronts, horizontal surfaces, and tops are constructed from pre-impregnated carbon on a Nomex core, laminated to the hull as part of the internal framework. The lower deck boasts two luxurious and comfortable double cabins. The master suite is centrally located, while the VIP cabin graces the bow. Both feature expansive, unobstructed double-sided windows, ample wardrobes, generous storage, exquisite furnishings crafted from premium materials, desks, vanity spaces, and en suite bathrooms. The third guest cabin offers twin beds that can be electrically converted into a double berth, along with its own en suite bathroom. All below-deck areas are equipped with sliding doors to enhance space and livability. Starting from the bow, the interior reveals a roomy sail locker with two service bunks and two symmetrical guest cabins, each with a private bathroom. Amidships lies a spacious dinette, the heart of the yacht, which also includes the owner's galley. The master cabin, located in the beam area, features two symmetrical beds separated from the study, as per the owner's preference, and a private bathroom. Moving towards the stern, the crew quarters are completely independent, ensuring smooth onboard living and watch duty, complete with a private bathroom and galley. At the very aft, a garage offers storage space, including room for the tender. The deck plan reflects the signature style of Studio Vismara, featuring a low, livable deckhouse, wide walkways, and a comfortable maneuvering cockpit with dual wheels. Centrally located is a living cockpit designed for leisurely sailing. The yacht's performance is guaranteed by meticulous optimization of hull lines and appendages, ensuring peak sailing efficiency. The sail plan is a

standout innovation for a yacht of this class, featuring a rotating mast with a wing section made of carbon fiber, a collaborative effort between the design studios involved in the project.
