SPECIFICATIONS

Overview

The hull and the deck are built in reinforced resin with fibreglass, the superstructure in vinylester resin compound and e aramidic fibre. The gelcoat used is Neopentyl. The resins of the skincoat are in vynilester, which is an excellent protection against the osmosis process owing to its chemical-physical features. The reinforcement fibres of glass and Kevlar are comprised of mat and multiaxial fabric. The deck is built in compound with high density expanded PVC core in order to improve its rigidity and to support an excellent thermo-acoustic insulation. The structural braces, such as stringers, frames and floors are built in expanded PVC coated with multiaxial fibreglass and resin. The watertight structural bulkheads are built in fibreglass and composite plywood, the compartment bulkheads are built in composite plywood. The compound hull undergoes an ultrasound test carried out by a specialist company which certifies the thickness and features of the laminated section
