The Cheoy Lee 43'
A Motorsailer that really sails!

Has there ever been a motor-sailer that gave more than a token nod to the word "sail"? That actually moved as well as it did under power?

There is now. The Cheoy Lee 43 Motorsailer.

It is not often that a proven design has a chance to evolve to a new generation. With the addition of the flybridge concept Cheoy Lee has combined the form of a successful predecessor with the functions of her larger sisterships (53, 63 and 78) in the creation of a modern and efficient cruiser.

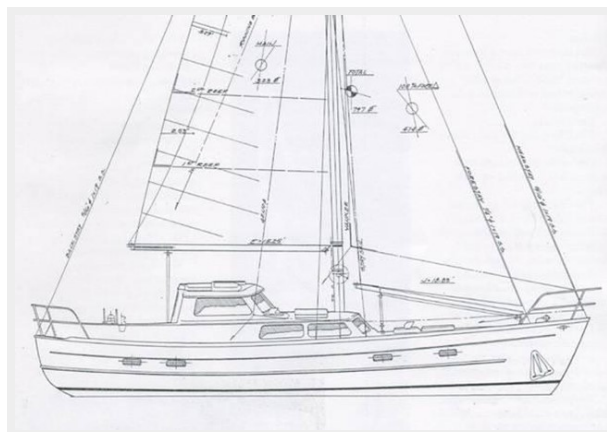

Her sail area to displacement ratio is in line with other performance cruisers. With a beam to waterline length ratio of 0.35 she is stiff, yet not so stiff that the concept of a sailboat is lost. At her helm the feeling of isolation from the water just isn't there.

Equally important the 43 is graceful under sail, easy to handle and quick to respond — a characteristic not known in the vast majority of motorsailers.

The deck layout is clean and uncluttered for ease of sail handling and enjoyment while cruising. An anchor windlifter for secure anchor operation. A platform keeps the anchor stored away from the deck. An electric windlass is standard supply, just one example of
