SPECIFICATIONS

Overview

Greenline's Hybrid technology goes past the ability of 20 nautical miles of propulsion. It supplies and stores free, sustainable solar power to be used at any time. Greenline's are also very efficient under diesel power! This allows you to enjoy the same yachting lifestyle yet be on the cutting edge of saving our waters and marine environment, as well as keeping cash in your wallet. Additionally, reducing the amount of fossil fuels burned and your carbon footprint is important to us all.

The Greenline 48 Hybrid is a new and exciting 3 cabin version with a tremendous flybridge. She would be ideal for a great choice of a Great Loop Boat!

The Greenline 48 is the latest and best from the Greenline range and the next green innovation that complements the current range of Greenline 33 and 40 while presenting a : new interior design, NextGen Hybrid system, comfortable flybridge, forward owner's cabin and two guest cabins, utility storage compartment under salon and huge utility room in leu of Captains Quarters. With all the novelties she presents a sophisticated new "Contemporary Look"

For your continued well-being on board With her great ease of handling, unmatched safety and seaworthiness this boat provides you with the comforts of your home for continued well-being on board..

Protecting the environment – and yourself She sails without smoke, noise or waves in electric mode and drastically reduces the amount of fossil fuel and carbon footprint used during a normal boating season.

Diesel or Electric Hybrid? All it takes is a flip of a switch to turn a diesel driven boat into full electric and back. Straightforward and simple and reliable.

Supplying AC power at all times 230 (120) VAC power at all times enables extensive use of domestic appliances and recreates the comfort of your own home: use of a full sized refrigerator , a microwave oven, TVs and AC. All without the need for a standard generator.

Comfortable With all the comforts of home and the spaciousness you would expect of a much bigger boat, you will never again have to look for excuses to return home earlier than planned.

Seaworthy With its hybrid propulsion system (protected), solar roof panels, seaworthy and low-drag Superdisplacement hull and unparalleled comfort, she is ready to meet any challenge. Greenline Hybrid will take you to the world's most attractive cruising areas – at sea, on lakes or inland waterways.

Respectful Greenline Hybrid respects the sea and our best boating traditions without impacting our environment. DYSID:2688220

GreenPad, Maximize your Greenline experience

The GreenPad is an iPad application that has been specially developed for the Greenline range of yachts. Wirelessly collecting data from the GreenBox in the engine room, it graphically shows the status of your Greenline on the iPad. All the boat data is presented through a user-friendly interface. It is packed with features, easy to use and comes with a customizable interface: just slide to set the detail level of your choice.

Boat status | Navigation | Weather | Communication | Entertainment

Silent Electric performance

When you combine one of the best insulated engine bays with a modern diesel engine, you get one of the most silent boats on the market today. With nothing more than a whisper-like hum at cruising speed, both when using electric or diesel power, the Greenline never disturbs your comfort while underway or when recharging the batteries.

Panoramic view in the salon

Extended glass surfaces throughout bring panoramic vistas and connection to the outer world. A spacious area / dinette in the salon allowing entertaining of up to 8 persons.

Adaptive owner's cabin

The owner's cabin forward offers space, storage and two very comfortable beds with household mattresses (80 x 200 cm). These can be separate with excellent side access, or repositioned in seconds to form a true double bed 160 x 200 cm. Ventilation and light comes from 3 opening hatches and portlights, one in the deck and two in the hulls. You can enjoy panoramic view, or use curtains for privacy.

230 (120) VAC power at any time

230 (120) VAC power at all times enable extensive use of domestic appliances (entertainment, computer, etc.) which can be brought from home, or bought/exchanged conveniently and affordably.

Superb guest cabin

The guest cabins to Port have standing headrooms and beds of same size and configuration (2 singles or one double) as the owner's cabin. A hanging locker, a hull window plus a ceiling sliding hatch with the open sliding salon roof providing sky view from the beds - in the both guest cabins, make these cabins light, open and well aerated.

Protected Superdisplacement Hull Design

Exceptional low-drag hull shape derived from sailboat hull lines

Benefits:

- less resistance, better seaworthiness and easier handling than any comparable hull
- reduced energy requirement means less running costs, less refueling stops and more time for cruising
- less wake and CO₂ emissions preserving the environment
- optimal performance in all sea conditions
- comfortable and safe ride

Protected Hybrid (diesel/electric) Propulsion System

- Hybrid drive
- Solar roof
- Lithium batteries

Benefits:

- can collect, store and use electrical energy from the sun, from the shore pick-up or from the main engine driven generator
- 230 (120) V AC available at any time, either at dock or at sea
- full sized fridge (270 liter), electrical oven, TV, air condition and other home appliances on

board

- cost and emission-free sailing in electric mode
- running costs of electric boating are 10 times less than burning diesel fuel, even disregarding solar energy
- ease of use and no maintenance

New Build Technology

- Advanced infusion technology
- Environmentally friendly
- Significant weight saving

Benefits:

- lighter and stronger yacht that further increases energy efficiency and performance
- through an enormous effort in time and money spent in the development phase of the Greenline Hybrid, this state-of-the-art product offers great performance, reliability and user friendliness at an incredible value for money

Efficiency

The revolutionary Superdisplacement hull is the secret behind Greenline Hybrid's ability to use less fuel, generate lower CO2 emissions, and produce less wake. The fuel consumption per nautical mile is less than that of a comparable displacement hull and as little as one quarter of a semi-displacement, twin-engine planing boat.

In a full boating season, Greenline will burn an amount of fossil fuel that is comparable to a sailing yacht of the same size and up to 4 times less than a twin-engine planing boat of the same size.

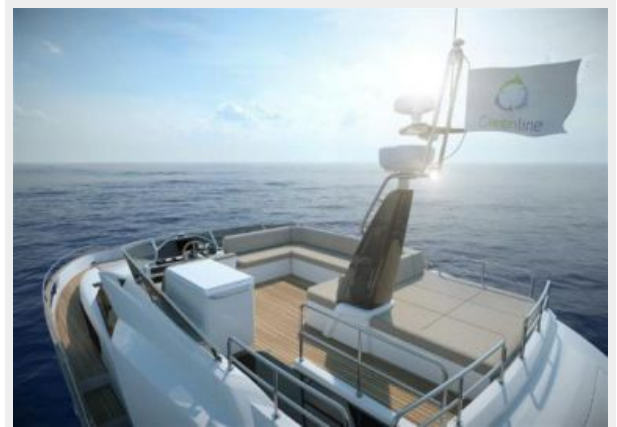

Exclusions

Owner's personal belongings.
