Details of the Hull

- The structural design for the hull has been approved by the RINA. This implies a guarantee of the structural quality which is also corroborated by the advanced techniques and materials used.
- Materials and building techniques are the result of researches to obtain the best performance in quality, weight and stiffness.
- Hull sides, cabin trays, and superstructures are reinforced with PVC foam cored sandwich (in order to achieve maximum rigidity and impact resistance) and have been built using the infusion technique, reducing weight increasing the quality level.
- VINYLESTER RESIN is used for the first coats of the hull lamination.
- This kind of resin is extremely effective in preventing osmosis, thanks to its chemical and physical characteristics. On this basis, Azimut can offer a 5-year warranty against osmosis.
- Deck, dekhuse and top are made by glass-carbon and vinylester resin, to guarantee higher stiffness and mechanical resistance reducing weight.
- The bulkheads are made of Sandwich panels of top-quality PVC foam.
- Main joinings (like hull and superstructure) are made by structural bond. The keel is a deep V type with aft deadrise of 15.8° and 21° amidship.
- Trim tabs increase the boat lift and reduce rolling effect.

External Layout Bow

- Anchor chain compartment
- Chain washdown with direct
- Anchor - DELTA 25 kg
- Calibrated chain 10mm L= 75m high resistance
- Stainless steel bow roller anchor holder
