# DETAILED INFORMATION

## Overview - General Specs

The Northwest 45 is a semi-displacement hulled trawler featuring 2 staterooms and 2 heads. The master stateroom has a queen sized berth and the guest stateroom, over/under bunks. Due to the unique hull design, standing headroom is found in the engine compartment, something not found on many semi-displacement hulled boats in this size range Northwest Yachts. Northwest Trawlers are constructed using all vinyl ester resins throughout, not just in the outer layers. Unlike polyester resins, vinyl ester resins can stretch up to 5% before fracturing. Northwest Trawlers are constructed using a uni-molding process that builds the boat with only 5 major molded components. This limits any secondary bonding and provides a much stronger integrated structure with little chance of stress cracking as there is little or no filler needed. Hull and deck of vacuum infused composite construction Kevlar layer in hull laminate located in the forward section below the waterline Hull Color: Fighting Lady Yellow (Awlgrip) Superstructure: Oyster White Scuppers on aft, starboard side, and foredeck Watertight bulkheads Floors, decks and major bulkheads are composite construction and laminated to hull Swim step integral to hull Interprotect 2000 barrier coat below waterline Black anti-fouling bottom paint Boot stripe Cap rails - molded Rub rails - integral molded Overhead halogen and LED deck lighting (24vdc) on exterior walk and outside
