Overview

Since the eighties, Damen and Delft University of Technology have cooperated in a research program aimed at improving the sea-keeping characteristics of high-speed vessels. In the beginning of the 21st century the "Axe Bow Concept" was developed, a hull shape with unparalleled sea-keeping characteristics. Based on this concept, Damen has developed the "Sea Axe" Patrol Vessels and Fast Crew Suppliers. The Sea Axe concept is also proving itself when it comes to sustainability because of the dramatic reduction in wave resistance. This unique innovation was developed for high-speed vessels initially to improve operability and for the comfort and safety of the crew. Fuel usage is cut by 20% because of the optimization of the hull form in real operating conditions. Sea Axe vessels have superior motion behavior, much lower resistance, improved fuel consumption and consequently, lower emissions.
