SPECIFICATIONS

Overview

Based upon pure Italian design in combination with the skilled Italian craftsmanship, the BUGARI F86 is a fusion between tradition and innovation. The result is an extremely innovative 86-footer yacht with a superyacht's soul. The modern interiors complemented by a large use of finest wood and marbles, feature full height windows providing panoramic vistas and plenty of light in main and lower deck. The functional lay-out ensuring smooth crew operations and guests' privacy, is designed to accommodate up to eight guests in four staterooms. The 35sqm owner stateroom, on main deck, features a folding balcony and a layout designed to achieve the maximum of privacy for the owner. Thanks to the "wide body" design the owner can enjoy the largest and most spacious stateroom available on this class of yacht. Big side windows as well as large skylight over the bed, provide a natural daylight ambience throughout the whole cabin. The impressive deck areas include a flybridge boasting a Jacuzzi and shaded dining area. The versatile aft deck features an extendable and submersible swimming platform that can also be used as a pier for the tender or the jetski.

Manufacturer: MAN

Model: V12-1900

Engine Type: Inboard

Fuel Type: Diesel

DETAILED INFORMATION

Construction

The hull is built in Glass Reinforced Plastic (GRP). The mechanical and chemical properties of the laminates have been verified in accordance to CE rules structural scantling procedures. The hull is FAST ECO HULL type and it's structurally provided with a strong grid of longitudinal girders framing on the bottom and sides of section in conjunction with floors, ribs and bulkheads in order to provide longitudinal and transversal strength. Special consideration has been paid to local reinforcements such as bow sections, machinery foundations, shaft brackets and internal casings in accommodation areas, bow thrusters tunnel, rudders, etc. The hull is protected by a complete anti-osmotic treatment. Decks and superstructure are built with a cored sandwich structure, by means of closed cell foam. Structure will be basically transversal. The superstructure and deck have part of the structural surfaces realized in carbon fibre in order to optimize the weight at equal strength.
