DETAILED INFORMATION

Air Step 2 Hull Design

Air Step 2 is an evolution and an upgrade of the first generations based on Beneteau's customer experience and their R&D Department.

The concept remains the same as the first generation: a V-shaped step under the hull with hard chines in the aft that generate a perfect grip when turning. The step creates an "air cushion" which reduces the drag thus improves performances and brings a smoother ride.

Air Step 2 has different air intakes under the hull. These are more simple to build but most of all they dramatically increase the air flow in the step.

There is **3 times more air** than the first generation air step. The results are significant:

- **1.5 knots more** in top speed
- Even less bow rise than in generation one. (*almost no bow rise at all*)
- Can now carry **1,500 lbs more load** and gear onboard without decreasing top speed (*this means more equipment and comfort with the same performance*)
